Annotatsiya: *ozonlashtirilgan yogʻ, immunitet mustahkamligi, erta qarishga qarshi, antioksidant tizimni faolligi, B5 provitami faolligi.*

Keywords: *sedana yogʻi, timoxinon, vitaminlar, bakteriatsid, mis, silin, miristen.*

Аннотация: *озонированное масло, иммунная сила, омоложение, активность антиоксидантной системы, активность провитамина B5.*

Ключевые слова: *масло седана, тимохинон, витамины, бактерицид, медь, силин, миристен.*

Abstract: *ozonated oil, immune strength, anti-aging, antioxidant system activity, provitamin B5 activity.*

Key words: *sedana oil, thymoquinone, vitamins, bactericide, copper, silin, myristene.*

Black sedana oil has been used in medicine by Eastern healers for many centuries. It is no secret that recently the babaho features of the black Sedana were also recognized by modern scientists. In the course of a lot of research, it was found that this product has a unique chemical composition, thanks to which it effectively affects the body, helping to treat many diseases.

Black sedana oil contains hundreds of active ingredients. They include organic acids (liniloin, myristin, stearin, etc.) semi-unsaturated fatty acids, amino acids, fetosterols, essential oils, saponins, 40% temoxinone, nitelon, beta-sterols. This product has been found to have trace elements such as calcium, phosphorus, copper, selenium, zinc, iron and vitamins A, C, E, B and many rich components.

Due to its diverse and rich composition, black sedana oil carries out the following processes in the body: restores immunity, anti-inflammatory, bacteriacid, anti-allergic, fever reducer, analgesic, urinary, calming, biliary drive, spasmolytic, fights strong parasitic diseases, mucous restorative, anti-sclerosis, anti-virus, anti-viral infections (from the flu to the SPID), rejuvenating, restores pH cells, heals hemorrhoids, brings cholesterol to balance, it carries out many processes, such as cleaning the digestive system. It is recommended for ozonized consumption in order to further enhance the beneficial properties of Sedana oil.

Ozonized oil is obtained by enriching sedana oils with gaseous ozone. Ozone is an extremely active compound consisting of three oxygen atoms. Ozone is a fast-spreading

substance, but stands for a long time without breaking down in the concentration given in the oil. Ozonides in fat literally resurrect human cells. They increase the amount of oxygen in the blood, activate enzymes, this process leads to the development of energy necessary for our life activities. In addition, they invigorate the cells left "mudrab" in the immune system and again force them to actively perform their functions. They release toxins and slags that accumulate in the body. Treats chronic fatigue syndrome. Reduces the risk of vascular diseases. Helps to increase the level of oxygen in the blood by 2-10 times. In the body, it loses bacteria, fungi and viruses, strengthens the immune system. Entering the skin or on the surface, oxygen atoms are released and move in several directions with a local and general effect on the body.

The local action of ozone is seen in improving blood circulation (microcirculation), oxygen saturation of tissues, activating the antioxidant system, ozone has a general immune modulating effect. Fights premature aging of the body.

On the basis of modern technologies, ozonized shampoo is currently produced. It contains ozone, black sedana Oil, keratin B5 provitamin, which have the following effects.

Under the influence of ozone, blood circulation improves, strengthens hair roots, prevents fragility and dryness, sedana oil relieves fungal infections and itchy skin, and also stops hair whitening at the expense of high biological activity. B5 provitamin provides hair care: nourishes, restores and makes it stronger from the root to the tip of the hair, covers the hair fibers, makes them strongly shiny and submissive, promotes hair growth, accelerates the division of epidermis cells. B5 provitamin provides moisture and softness, reducing moisture loss on the skin and ensuring its softness and elasticity.

In place of the conclusion, we can say that due to the unique chemical composition of black sedana oil and its effect on the body, many diseases are cured. At this point, the role of sedana oil in making each organism live a healthy life is incomparable.
