Annotation: *This article explores the essence of tutoring activities, their role in the educational process, and the requirements imposed on tutors. The responsibilities of tutors, their professional competencies, and their significance in modern education are analyzed.*

Keywords: *tutor, education, educational process, individual approach, pedagogical activity, competence.*

INTRODUCTION

The modern education system is undergoing significant transformations due to globalization and the rapid development of innovative technologies. The necessity of student-centered learning, individualized approaches, and the support of independent learners has driven the formation and development of the tutoring institute. Tutoring is a pedagogical activity aimed at supporting students' individual learning and ensuring their intellectual and personal growth.

Currently, the education system is increasingly based on new pedagogical approaches that focus on enhancing student engagement and fostering their ability to acquire knowledge independently. In the traditional education system, teachers primarily focus on delivering knowledge, whereas tutors assist students in organizing their independent learning process and personal development.

Tutoring activities are especially widespread in developed countries, where they have become an integral part of the educational process. For example, in the United Kingdom, the United States, and Germany, tutors not only help students acquire knowledge but also support their social and psychological development. In Uzbekistan, the tutoring system is gradually being introduced, and its development is considered one of the key directions of educational reforms.

THE ESSENCE AND RESPONSIBILITIES OF TUTORING

A tutor is a specialist who manages the educational process, guides students through their learning, and helps develop educational strategies tailored to their abilities and needs. The main responsibilities of a tutor include:

1. Developing individual learning programs – Planning the educational process according to each student's needs and abilities.

2. Monitoring the learning process – Tracking students' progress and providing guidance when necessary.

3. Motivation and counseling – Enhancing students' interest in learning and helping them stay motivated toward their academic goals.

4. Scientific and career guidance – Assisting students in making informed choices regarding their academic and professional development.

REQUIREMENTS FOR TUTORS

To become a tutor, one must possess not only high pedagogical skills but also specific personal qualities. The essential requirements for tutoring include:

1. Pedagogical and psychological knowledge – A deep understanding of the educational process and human psychology.

2. Strong communication skills – The ability to establish effective communication with students, identify their needs, and provide appropriate guidance.

3. Motivation and leadership abilities – Encouraging students to work on themselves and guiding them in the right direction.

4. Technological literacy – Competence in working within a digital learning environment and utilizing various online resources.

5. Application of modern pedagogical methods – Using innovative educational technologies to facilitate the learning process.

CONCLUSION

Tutoring is a crucial aspect of the modern education system, serving as an effective method to foster independent learning and personal development in students. A tutor's pedagogical expertise, individualized approach, and psychological preparedness ensure the success of this process. Therefore, further development of the tutoring institution and improvement of tutor requirements will contribute to enhancing the quality of education.
