Phraseologisms, like words, express a holistic meaning, but phraseological in terms of meaning, it differs from lexical meaning. Phraseological meaning supplement will consist of

attencas. Brand, frazeolo-gizm about action vs the information that represents is called phraseological meaning. For example: now the fourth rota would also be a lover cherry if we secured her with ration. You're here when I heard, nothing appeared in my eyes, I said that I could fly.(O) the phraseologism in the first example denotes a sign, and the one in the second example denotes an action. Shu hence, phraseological meaning even in cases where phraseologisms are synonymous with words will not be equal to each other. Phraseological meaning volume to the volume of lexical meaning it is relatively wide, complex. In the sense of plural-na phraseologisms, the word is a component that has no meaning. For example: a hard nut to crack-a very difficult problem. (Lightning in the head-to suffer to an extreme extent). It can be seen that in the sense of these phraseologisms there is a holistic meaning, phraseologisms words in the composition will not have independence of meaning. Therefore, some although the components of phraseologisms change, phraseological meaning is maintained: For example: to stand to one's guns-to stick one's guns; one money-two money-three money. The arguments made, phraseologisms although express a holistic meaning, such as words, but shows that the nature of lexical meaning is not the same with phraseological meaning. Phraseologisms have character traits that are semantically different from words even because it has appeared in the language and live though. Interlaced in essence, these words are equivalent to a compound or a sentence. Such a compound or phraseological meaning, which is understood from the sentence to its integrity, as its syntactic unit not leads to the view that se is a Mantic unit. For this reason, the compound may be given either when talking about equality to the sentence, the internal syntactic construction of the phrase is envisaged; syntactic analysis of the composition of the phrase language, and not the composition of the unit of speech there will be an analysis of the composition of the unit. In general, the phrase participated in the composition the syntactic connection between words maintains its strength, only internal. For example: - sufferers iborasi the phrase is equivalent to a sentence in terms of internal syntactic construction, the same the variant of the same phrase is equivalent to a compound. Such a syntactic and the reconstruction occurs in connection with the fact that the verb makes a proportion to the phrase; without transitions if the verb is consonant with the noun in the general agreement, the gain ratio after taking the yasovchi and turning into a firewood, the head agreement of the horse component proceeds switches to arrival.
